Internal Demo of Amazon _ Grand toy-20261029_175922UTC-Meeting Recording

October 29, 2026, 5:59PM

42m 13s

Usman Zahid 3:09
Iain.
So, I'm just waiting for Chris and Basit. Once they will arrive, then we can start.

Alyshia Digiovannantonio 3:33
Sounds good.

Chris Bilton 3:45
My apologies, we were in another call with Bhaumik and Basit and Moiz. And now we jumped over here.

Usman Zahid 3:56
Hi, hi everyone.

Muhammad Basit Munir 3:56
Hi, guys.
And let me call Bhaumik and Moiz here as well.

Bhaumik Dhandhukia 4:28
Hello, guys, Keith.

Usman Zahid 4:32
Hi, everyone.

Bhaumik Dhandhukia 4:36
Hey, Usman.

Usman Zahid 4:38
So, shall we start?

Chris Bilton 4:42
Yes, please.

Bhaumik Dhandhukia 4:43
Yep.

Usman Zahid 4:44
Okay, let me share my screen.
Okay, I hope my screen is visible.

Muhammad Basit Munir 4:56
Yes, it is.

Usman Zahid 4:58
OK, so let me log out this user, and so I'm going to log in as a store store owner, so let me try it first.
Please.
Okay, so once store owner logged in, he will see these menu items. So he can click on the explore products. So these are our normal WooCommerce products which he can see. So now we are going to add to cart any one of the product. So let's say...
Let me check the product. OK, let me check this one. Add to cart.
Now I'm going to check on checkout. So on checkout, we have option for multiple vendors. So here from dropdown, we can select either it's Amazon or a Grand NY. So if we will select Amazon, so this will fetch the price from the Amazon. So this is the now price is updated.
Two 101, so now price is 201. If I will select the grand and toy, then it will check the grand and toy as all the stocks and fetch the fetch the price if the product is available there. So, right now, no product is available there, so if I will go proceed with the Amazon.
I can do a checkout, but I will first show the grant and toy product.
So, on our products.
Let's say this product.
So, I'm going to select Grand and Joy, so now the price is 219, so it's fetching the price from Grand and Joy, so now price is updated to 100 and eighty-eight, so I'm

proceeding with checkout.
So on checkout, this is just an order summary, so I can place an order here.
The vendor is already selected, so I'm placing an order.
So, here are the validations which which we have updated, like the monthly budget of 160 used for like the validations which we have added in our back end in our WooCommerce, like $120 gap against the store on a.
So that is the budget because the price is increasing on that. So this can be customizable. So right now this is the validation here, but I can show you the other product which has.
Blessed among.
Yes, Chris.

CB **Chris Bilton** 7:57
So again, I'm going to ask this when, sorry, because a message came through and I missed a portion of it, but.
You said you were logging in as a store, correct? So this is what our store teams would see, right?

UZ **Usman Zahid** 8:08
Store, yeah.
Yeah, yeah.

CB **Chris Bilton** 8:12
So, went from our from the conversation we had last week.
What I had asked was I right what I suggested or not. I wouldn't say suggested, but the stores don't need to see the vendor.

UZ **Usman Zahid** 8:29
Okay.

CB **Chris Bilton** 8:31
That was, that was literally discussed last week.
Because I asked that, because I said, the reality being is that the flow of, this is how I explained it last week. So the flow is the store sees the page that we give them. They don't, it doesn't, they don't care. It doesn't have any, the stores don't even need to

know where it's coming from.
The only people that need to see it are the managers, which would be Alyshia, Hillel, and myself. That's it. So it's...

Muhammad Basit Munir 8:59
Uh, uh, so...

CB

Chris Bilton 9:01
The well.

Muhammad Basit Munir 9:01
Search to cut you.

CB

Chris Bilton 9:03
Yeah, I know, but this is where we, I guess, literally had this, we had this conversation last week, so...
It's irrelevant for what the stores see other than the fact that this is add this to cart. That's fine. The people who need to see the pricing is me, Alyshia, and Hillel. That's the only ones who need to see it because we're the ones who are doing the Approvals or not. Not the stores. All the stores are doing is replacing an order. Right? So when they place the order, all it does is it just fills the cart with whatever, and we have the parameters in place that it will not allow the store to, let's say, essentially go over budget and order more than multiple times because we only allow a once a month cadence.
And then, once it goes for approval.
That's at the point where we want to be able to check to see if it's Amazon that we're ordering from or if it's Gran and Toy.

UZ

Usman Zahid 10:00
Okay.

Muhammad Basit Munir 10:01
Right, so we will go that one at the operation side as well. We have that thing over there as well. But that was an additional thing we thought of to introduce on store side because on explore product page, we are showing prices and that prices may

vary. So in that case, as you are saying,
We need to hide prices for stores, because that will not those vary from vendor to vendor, so...

Chris Bilton 10:28
Well, so here's the thing. I agree with what you're saying, but at the same time, like...

Usman Zahid 10:28
Exactly.

Chris Bilton 10:34
They would need to know, they would have to have some sort of threshold to see what their, where they are in their budget.
Right, but that would be the only thing and yes, you're right, it would it would be varied, but it shouldn't be like literally.
We shouldn't see a situation where somebody has, let's say for this card, it says $146 remaining, or let's say it's $14. I don't think we're going to see a situation where the store's going to order something and then it's going to come to us and we're going to see a mass, we might, but then it adjusts and it should make...
the reference of like in that sense, let's just say, I'll give you an example. So this store that's being used right now, the budget, I wouldn't want a store to use only $14 in their budget. I want them to use $160 technically, which that has to change by the way, because all stores now are the same budget of $125.
Right, I don't know if you remember that on the on the ops call, that's it, but that was communicated that all stores have now shifted from a tiered to now everybody's 125 because now we we did they don't buy thermal rolls from here, they're automatically shipped, so we've taken that out of their budget because it's already covered.
So...
What the goal would be is we want the stores to essentially use what they have to use every month. We don't want them to go over and we only want them to order once a month. So if there's a scenario where let's say it's $125 and it says 122, but there's a pricing variation because of an out of stock or whatever, that comes down to the approval for Alyshia, Hillel and myself.
that if we want to allow that to push through, then we have the ability. Or if it, let's say it's something that's a dramatic price, which we shouldn't see it because you're

maybe talking a few dollars here and there. But in that realm, we could reach out to the store to say, hey, we actually got this whatever SKU a little bit cheaper, and you have a little bit more room. Is there anything you'd want to add?
I don't think that would happen very often, but that would be essentially what our process would be for the beginning.
Does that make sense? But again, I think you need to see the price and it's a reasonable fact some of what the prices are and I get it as long as it's not 20 or $30 difference, but the stores don't need to see.
They don't need to see the vendor. They don't need to see any of that. That's irrelevant. A set price is fine, like I said, and we can adapt from that point once our team validates that what's the best price to go through, and then when we make the order, then it goes that way. Does that make sense?

Muhammad Basit Munir 13:14
Ohh yeah, so what we can do on our site for, since we need to show the price, Usman, I will take it that offline, how we can handle the prices, because we may run it on that will be technical, so team don't want to interest in that, we will take that offline, meanwhile you can switch.

UZ

Usman Zahid 13:14
Yeah.

Muhammad Basit Munir 13:33
to admin view since you have placed a couple of orders. So we can go over that side now.

UZ

Usman Zahid 13:36
Yeah.
Sure, so the order is placed. Let me log in with Manager Dashboard.
So now I'm in the Manager dashboard.
Here in the order section.
I can see that order which I just ordered is waiting for approval. So here the manager can view the details for that order. So he can see the order details, the billing details, the vendor he selected, and monthly usage for that as well.
and he can approve or reject the order. So once he will approve the order.

The order will be approved, and he can now.
do the order for the Grand Android or Amazon. So as he selected the Grand Android during the checkout, so Grand Android is already selected, so he can do a checkout and do an order to Grand Android.
So, here, Gran and Joy, and then I will just click one click, use store details and check out.
Uh, yes.

Aman Sood 15:14
Thank you, Usman. So I am a little late to the party, guys. Actually, I was the first one in the party and no one showed up. Only Usman was there and everyone else was not there at all. So I had to jump onto another call. But can I request to, you know, start from the scratch so I can see the whole thing again, please? Apologies, but I want to see it.

Usman Zahid 15:35
Yeah, sure.

Aman Sood 15:36
And by the way, Muhammad Basit, Alyshia, Chris, Bhaumik, Muhammad Moiz, no one was on the call.
when it was supposed to be 12 o'clock. Usman was the only person there.

Chris Bilton 15:45
No, I know. We jumped into another call right before it, and then we moved everybody over to this call.

Aman Sood 15:53
Well, that's not fair. I waited for one minute, one minute and twenty-eight seconds before I jumped off.

Chris Bilton 15:55
I know it was totally enough air; it was about delivery, but...
I got there too after, so I 100%. And you can ask anybody who is Basit and Bhaumik. I said, we need to move over because Aman might be in that call. So.

Aman Sood 16:08

I was there and Usman was, Usman was here.

CB

Chris Bilton 16:11

I know. Yeah, I know.

My apologies.

Aman Sood 16:14

Basit is always late, Bhaumik is still sleeping, probably.

Bhaumik Dhandhukia 16:17

Excuse me.

No, actually, I'm not sure when this meeting was, Moiz.

Aman Sood 16:23

Huh?

CB

Chris Bilton 16:24

This was booked.

Muhammad Basit Munir 16:25

No, it was not in Bhaumik and Moiz calendar. I noted them now.

MM

Muhammad Moiz 16:29

Yeah, I don't see it in my calendar either.

Aman Sood 16:33

Yeah, Bhaumik is probably sleeping. It's only 12 o'clock. Bhaumik is not even for time for you to wake up anyway, so...

Bhaumik Dhandhukia 16:33

Yeah, that's why I'm getting confused then, please get this.

Aman Sood 16:41
Yeah.

Bhaumik Dhandhukia 16:41
I can wake up, it just like I didn't have the invite, like Basit is now.

Aman Sood 16:45
That's okay, I'm just kidding. I'm just kidding. All right, Usman, let's start all over again, sir, please.

Usman Zahid 16:50
Okay, okay, sure. I can start it again. So we had all, so currently I'm going to log in with a store owner. So let me log in.
And on store or store owner, you can explore the products. So these are the products which are available here. So from here, you can select any product. Let's say this product.
Add to card, view card, so on view card.

Chris Bilton 17:22
Can you, oh sorry, can you do me a favor? Can you, well we have to obviously update you the budgets, but can you show what happens if you exceed the budget?

Usman Zahid 17:26
Yeah, sure.
Yeah, sure. So on exceeding.

Aman Sood 17:34
Let's one second, sorry. So why do we have the option to select vendor for store? We don't need that option for them.

Chris Bilton 17:41
I know I've already talked about that.

Usman Zahid 17:41

Yeah, we just discussed that, yeah. So here, based on that, if I select Amazon on Grand Int, then based on that, it is updating the price and showing the price here. So we just discussed, yeah.

Aman Sood 17:44
Okay.
No, so we need a default. We need a default rule here. The product between both the vendors, whoever the cheapest vendor is, it automatically should pick that.

Usman Zahid 17:55
Okay.

Bhaumik Dhandhukia 18:00
You.
There was the original discussion, like, uh, we are very close. I mean, you guys can achieve this, but yeah, that was the original requirement.

Usman Zahid 18:09
Okay, so it will be like automatically the cheapest vendor here or we will be just showing the base price.

Bhaumik Dhandhukia 18:13
Yeah, so...

Aman Sood 18:14
Yeah.

Bhaumik Dhandhukia 18:16
Usman, do this, call both the APIs, try to fetch the price and compare which one is greater, sorry, which one is the lower one, and then pull in that price in here automatically. That's it.

Usman Zahid 18:27
Okay, that's fine. So I can...

Aman Sood 18:29
And that would that has been a requirement from the get-go. I'm not sure why we're discussing it now.

Bhaumik Dhandhukia 18:34
Mhm.

Muhammad Basit Munir 18:36
No, I think previously Faisal was working on this and might be someone taken it from middle, so it was missed from there, but I will talk to Salman and we will set things up, because right now it's pulling all the information on runtime directly via IP, so since we are on...

Bhaumik Dhandhukia 18:36
This will be doable, this will doable.

Muhammad Basit Munir 18:57
Going on that direction, we will do a one-time crone, one-time sync daily, so we don't have to make the API calls every time to the vendor.

Usman Zahid 19:05
Yeah.

Aman Sood 19:07
Okay, sure. So who's making notes for the changes we're requesting or the original request?

Muhammad Basit Munir 19:14
I'm writing this.

Aman Sood 19:15
Okay, alright, let's move on. Usman, show me what's the next step. So we added this product and let's make it, you know, instead of quantity one.

Usman Zahid 19:24
But.

Aman Sood 19:28
Go back.
Book one in 200, just type it.
Okay, proceed to checkout.

Usman Zahid 19:45
Yeah.
So, here, budget exceeded monthly budget is 160, so he was so far to twenty-four dollar current card is so it has a limit of 160 at the moment, so that's why he cannot proceed further.

Aman Sood 19:48
Yeah.
Okay.
Okay, perfect.
And we're going to remove the vendor name anyways from here because those don't need to see vendor name. Okay, perfect.

Bhaumik Dhandhukia 20:06
Who?

Usman Zahid 20:08
Yeah, I remove that, yes.

Bhaumik Dhandhukia 20:10
So one suggestion, Usman, try to bring this alert on the top instead of at the bottom.

Usman Zahid 20:14
Yeah, that I will update the UI. UI is just like for our dummy MVB version. So once the flow is finalized, I can update the whole UI working.

Aman Sood 20:24
Can you add one more button here on, you know, go back to card or fix the card, something like that, rather than, you know, expecting someone to click on the browser back button?

Usman Zahid 20:33
Yeah, sure.

Aman Sood 20:35
Because I don't want someone to go back to the browser. That just causes unnecessary problems. Just do, you know, back to cart button.

Usman Zahid 20:38
Yeah.
Yeah, sure, understood.
So, I can update that for now. Let's close over the one.
So, order is placed, so now I'm going to log out and log in with Manager Dashboard.
Sood.

Aman Sood 21:11
Just hold on here for one second, Usman. So Chris and Basit as well.
Did we agree that we're going to let the stores order multiple times in a month? Because I thought we were giving them a week. So why are we doing, you know, order 25, left 135? Why do we have that concept? Does that mean we can order multiple times?

Chris Bilton 21:22
No.
No, it that.
We shouldn't be, and this is I discussed this just before you jumped on, because it's where one day there's okay, so there's the updates on the budgets have to change because there's no 160 anymore, but then again, like I just stated, is that it's only a one and done, right? Like, if and to that point, if the store...
I'd rather not have a, we don't, yeah, it's only one and done, that's it. They only get to

do one order and that order falls within their ordering window, which is whatever week of the month. But yeah, they can't, there's no secondary order. Unfortunately, if they miss it, they miss it.

Aman Sood 22:06

Yep, so Usman, what we need to do here is, number one, we have to define a timeline for ordering. So which should be, you know, I think Chris and Alyshia should be able to define it on the back end if they need to change it. What that means is the store, let's say store one to store 100.

UZ

Usman Zahid 22:09

Yeah.

Aman Sood 22:25

The first 100 stores can order between 1st of the month and the 7th of the month. The next 100 stores can order from 7th of the month to the 15th of the month. They should only be able to order once. There should not be multiple orders. However, if someone needs to do another order, that should still be sent for approval to Alyshia.

UZ

Usman Zahid 22:30

Okay.

OK, got it.

Aman Sood 22:47

Right.

UZ

Usman Zahid 22:48

Yeah.

Aman Sood 22:49

But see, all these things were originally requested because I personally requested all these things and you know, one year later we're still back to square one.

Bhaumik Dhandhukia 22:49

So, Aman, we...

Yeah, so come on, Moloo.
I mean, we do have the monthly quota in the back end, so if you set like you have one order per store, that will set it up as one order per store, but it seems like the weekly part is something we need to optimize for the.

Aman Sood 23:11
OK.

Bhaumik Dhandhukia 23:11
So, Usman, if you went to the back end, I'll show where it is, like, inside the stores module.

Aman Sood 23:20
You guys can do it later, man. Let's continue with it, because you know I have lots of other stuff to do. I'm actually not even working today, but I joined it. So let's show me the functionalities, please. And then you guys can do the backend stuff later.

UZ

Usman Zahid 23:20
Inverter.
Big.
Sure.
So, the order that I just placed, it's here awaiting approval, so...
Manager Dashboard Manager can view that order.
so he can simply see the order details.

Aman Sood 23:47
So which managers are you talking about, store manager or?

UZ

Usman Zahid 23:51
Like, there are two different roles. One is a store owner that is creating the order and this is a manager who is like viewing and approving that order.

Aman Sood 23:55
Yeah.

Bhaumik Dhandhukia 23:59
Supply Manager, basically, you know, is Chris or relation.

Usman Zahid 24:01
So, yeah.

Chris Bilton 24:01
Yeah, this would be Alyshia, Hillel, and myself. Yeah, this is Ops team.

Aman Sood 24:01
So yeah, so yeah, so name it correctly, please. Don't say manager dashboard confuses it, just say supply manager or approving manager or something, right? So there is no confusion on what kind of manager it is because we have lots of managers in the company, right? Okay, so this goes to the manager for approval. Now, when they already submitted.

Bhaumik Dhandhukia 24:08
Similar.

Usman Zahid 24:11
Okay.

Chris Bilton 24:11
Yep.

Aman Sood 24:20
Does it trigger a notification which goes to that approver's e-mail as well?

Usman Zahid 24:26
Yeah, the e-mail configuration are in place, but right now, on testing purposes, it is not like, yeah.

Aman Sood 24:30

That's fine, but it will go to the e-mail ID we provide. So for example, if it's Alyshia e-mail.

Usman Zahid 24:33
Yeah, one rejection as well, it will, yeah, it will send.

Aman Sood 24:39
Okay, it will send to Alyshia for approval, but why are we waiting for approval if everything, Chris, we discussed that and Bhaumik, we discussed that last time we just chatted. If everything is already pre-approved, why are we stopping it for approval for approving Manager anyways? I don't get it.

Chris Bilton 24:50
if it meets the requirements.

Bhaumik Dhandhukia 24:58
Everything is pre-approved.

Aman Sood 24:58
If all the parameters are matching Bhaumik, because the pricing is controlled by Alyshia, it's already controlled by Alyshia, right? So the prices are approved. You are setting up a rule where the lowest price will automatically be picked between 2 vendors. That's already pre-approved. Budgets are already pre-approved. So why are we sending it for approval again now?

Bhaumik Dhandhukia 25:04
Mhm.
Got it.
Ohh.

Chris Bilton 25:19
Good call.

Bhaumik Dhandhukia 25:21
Yeah, that's a good catch.

Chris Bilton 25:21
Redundant.

Muhammad Basit Munir 25:22
No, I think that was discussed.

Aman Sood 25:22
Because I thought I discussed that last time I had a meeting with you guys as well. We don't need approval. It's all pre-approved. The whole purpose of this website is Alyshia doesn't have to check 235 orders.

Bhaumik Dhandhukia 25:32
Mhm.

Muhammad Basit Munir 25:33
Now, I think a couple of meetings ago, it was asked to add the step. So everything will be approved manually.

Aman Sood 25:39
This tab, this tab is only be applicable if someone is over their budget or someone is ordering something out of the cycle. If people are ordering within their ordering cycle, within their budget, then everything is already controlled, right, Basit?

Chris Bilton 25:44
Right.

Muhammad Basit Munir 25:55
Yep, initially it was designed that way, but as I said, couple of weeks ago, it was it came up like we need to add that approval strap.

Aman Sood 26:03
Who, who, who requested that? Who, because both the people from operations team are here, Alyshia and Chris, who request?

Muhammad Basit Munir 26:05
I think...
Yeah, I think Chris, if I'm not wrong, we discussed that you would is that.

Chris Bilton 26:15
I'm trying to, I'm trying to, I mean, it may have been, I don't remember. I remember, I know that we had, like I said, what Aman said is true in the sense that if it's already approved.
That, that my, I can't say, or I can't deny it either, because I don't remember, to be honest, I don't.

Muhammad Basit Munir 26:27
Initially.
Yeah, initial setup was in that way. Like if it is under budget, it will be automatically approved.

Aman Sood 26:37
No, Basit, Basit, the last meeting I had with Sri Bhaumik, I think you were on there as well. That was not set up like that. I specifically made a request. Bhaumik, I don't know if you remember or not. I made a request that why do we need to send it for approval? Do you remember Bhaumik by any chance?

Bhaumik Dhandhukia 26:54
Um...

Aman Sood 26:55
Maybe not. Okay.

Muhammad Basit Munir 26:56
Aman, that was that was discussed in our in that meeting, like if it is under budget and it's lowest price, then it will be auto approved, but but I said in our previous meetings, it the point came up for the approval strap, so that is why we tagged that, but we can roll back this change, so it will, if it is under budget per month.

Bhaumik Dhandhukia 27:08
So, so let's look into next time, Basit.

Aman Sood 27:16
Yes, please, please, please roll, please roll back the change. Yeah, please roll back the change Basit, and you know I have a request, you know, a kind request that if I have made a request for something and if for any reason it's being changed.

Muhammad Basit Munir 27:17
We can, it will be auto-approved.

Aman Sood 27:31
I need to be informed because that was a request from me. And if you're changing my request, then I need to be informed, please. But please hold back, you know, so we don't need anything to be approved. It should be all pre-approved. The only time when Alyshia needs to approve is when someone is sending an order which is outside of budget or outside of the ordering window or a double order because emergencies happen, right? A store might need something in an emergency basis because for some...

Muhammad Basit Munir 27:38
Okay.

Aman Sood 27:55
some reason they're out and they didn't have enough money to buy it earlier. Now they send that request, but that request should go to Alyshia for approval, right?

Muhammad Basit Munir 28:04
Okay.

Bhaumik Dhandhukia 28:04
So we need to change the flow on the front end as well a little bit for the over exiting budget because we are completely blocking them right now to order, right?

Aman Sood 28:05
And if...
Yeah, so we can we can leave it on e-mail then, Bhaumik, that's fine too. I don't want you, I don't want to increase the work for you. Maybe on the website itself, we just add a, you know, request out of the cycle order, and then they just submit the form, it goes to Alyshia, and then Alyshia can place the order. Is that easier?

Bhaumik Dhandhukia 28:30
Got it. Got it.

Aman Sood 28:32
Right, because you know I don't want you to keep changing things if it's not there, because the goal is to avoid out of the cycle orders completely. That's what we want. But out of 235 stores, if one store has to order something on an urgent basis because you know their printer broke for some reason and whatnot, then you know.

Bhaumik Dhandhukia 28:43
Thank you.

Aman Sood 28:50
We can just put a form there which can be submitted, which can go to Alyshia. Is that fair, Alyshia? We can handle it that way.

Alyshia Digiovannantonio 28:59
Yeah, that definitely works.

Bhaumik Dhandhukia 29:01
But one thing, Aman, then, you know, anything that is going as an order through Alyshia will not be reported in this particular system, right? So if we are using this as an analytic system in future, that will get a greater conflict. If you want us to design that flow, we can do that actually.

Aman Sood 29:17
Sure, whatever is easy for you, Bhaumik. I'm okay with either ways. Whatever works

better for you guys. You know, definitely if you want to design that in the flow, that's fine as well. But you know, could that be, you know, addition that week later? Because I don't want to hold this project back, right? I don't want another two months for that. So can we launch it like this and then you add that a month later?

Bhaumik Dhandhukia 29:32

Mmh.

Got it, yeah, we can do that.

Aman Sood 29:39

So let's do that. Okay, let's move on Usman.

UZ

Usman Zahid 29:43

Okay, so once the order is approved, then Manager can select either he can also change from here the vendor, otherwise he can proceed with the already selected vendor. He can just compute.

Aman Sood 29:55

So this will, this, this, this area will be probably not used. It can stay there because we just agreed that, you know, it's going to be auto approved, right?

UZ

Usman Zahid 30:02

Yeah, auto approve. So then auto approve means that order will be auto approve or order on auto approve it will automatically check out to the selected vendor.

Okay.

Okay.

Aman Sood 30:27

vendor is picked, then it should automatically submit to the vendors.

UZ

Usman Zahid 30:31

Yeah, got it.

So, these all steps will be excluded from the current flows, so on.

Aman Sood 30:39

You can, you can, you can leave them here if you want to, but this can be skipped. So, you know, I don't think that these are needed, but I don't want you to invest time on changing it and stop, you know, waiting for the launch.

Usman Zahid 30:50
Yeah, sure. So he's just doing checkout here.

Aman Sood 31:02
All these fields should automatically be filled.

Usman Zahid 31:04
Yeah.

Aman Sood 31:08
So Usman, the goal of this project is to automate everything. If we have to involve people, then it's not automated, right?

Usman Zahid 31:16
OK, sorry, apologize for these, because I have joined in the middle, because things are faster.

Aman Sood 31:20
That's okay, Usman. It's not your fault. It's not your fault. It's Basit's fault, as always. It's just not your fault. I know that. Basit doesn't want to work, man. I've been working with Basit for, I don't know, six years, and that's all he does. Messes up the whole project, right, Basit?

Muhammad Basit Munir 31:35
Not right.

Aman Sood 31:36
Not right, okay, left then.
Usman, don't take it personally. It's not on you. So you do what you're doing and Basit and Bhaumik will, you know, kind of help you behind the scenes on making these changes. I understand this project has changed hand multiple times.

Usman Zahid 31:40
Okay, so...
No, no.
Sure, so the order is successfully submitted. These are the order details which we received from the grant and twice. Just for reference, I'm showing here the response for the appear like order is successfully submitted, so...
That's it.

Aman Sood 32:11
So order is submitted, but then who gets the notification that order is submitted? Store will get a notification, correct?

Usman Zahid 32:18
Yeah.

Aman Sood 32:20
And does the supply Manager get the notification as well?

Usman Zahid 32:25
Not at the moment, but I can plug in that as well.

Aman Sood 32:29
Yeah, just add, and you know, because we're going to use a mailbox which is not going to be monitored, but all the order confirmation, at least for documentation purposes, at least you know that mailbox will receive that order was submitted because I don't want a situation where Grant and Toy comes back and say, well, we did never receive the order. We want to have the documentation approved with, well, this is the order submitted on this date. So Alyshia should have.

Usman Zahid 32:35
Yeah.

Aman Sood 32:50

somewhere to go back and go through those emails, but the mailbox will be not monitored.

Usman Zahid 32:56
Sure, that makes sense.

Aman Sood 32:59
Okay, now this is good and I'm assuming that the order is already with Grant and Toy. That's my assumption. You guys have to verify that. Now, where is the reporting?

Usman Zahid 33:05
Yes.
Currently, that is not in place. Like, we can just see the orders or already submitted orders, but proper reportings are not there at the moment.

Aman Sood 33:23
So, Usman, you know, now you have to, you know, stay put for a second. So, Basit and Bhaumik, I requested for reports from day one a year ago.

Bhaumik Dhandhukia 33:36
I'm sorry, report.

Aman Sood 33:36
What it will, what, what am I gonna do with the tool if I can't find reporting? If Alyshia needs to find out, you know, how many stores have ordered, what, where is it?

Bhaumik Dhandhukia 33:44
Ohh.
There was an export button here, I don't know where it went.

Usman Zahid 33:50
Ohh.

Bhaumik Dhandhukia 33:52

So, uh, I'm kind of like I was aware that that the time when these guys made a lot of changes, but we had the export button here. Yeah, that's the exports here. We had the export on the orders as well as products as well.

Usman Zahid 33:59
Yeah.

Aman Sood 34:06
So, so team here, here's my request: export CSV is not something you know. Operations leaders should do. We should have a dashboard and reporting.
This is a full supply chain, you know, thing we're trying to build here with absolutely no reporting. Let's say if I want to run a report and I want to see, you know what, how much did we order with Grand and Toy and how much did we order with Amazon this month? Where is my report? We are spending $50,000 a month on supplies with no reports.

Bhaumik Dhandhukia 34:39
So, going to the products, for example, Usman.

Usman Zahid 34:42
Yeah.

Bhaumik Dhandhukia 34:46
The export products we have there, uh, going to the stores.

Usman Zahid 34:51
Stores.

Bhaumik Dhandhukia 34:55
I remember having export embedded on all the modules.
So, not, you know, it's not here, and then on your dash.

Aman Sood 35:02
So, Bhaumik, is not, is not, Bhaumik is not overly complicated to create reports and dashboards, just add the plugin and...

Bhaumik Dhandhukia 35:09

So I think you're referring to like kind of like charts and analytics line numbers and stats.

Aman Sood 35:13

No, no, no, no, analytics is one thing. I'm talking about two different things. One is 1 is gonna be analytics, yes. Second thing is, you know, reports to be pulled. We live in a time where, you know, AI is doing everything. This website I'm seeing right now, it reminds me of 1983. It doesn't tell me about 2026 because, you know...

You guys use cloud, you guys use, you know, ChatGPT. Everything is agentic AI, right? And I don't even have reports here. I can't even find any data if I need to. If I have to ask Alyshia, Alyshia, tell me how much did we spend with Grant and Toy this month? Where is it? You expect her to pull a CSV and then put the summation formula and then, you know, run into an Excel file and make.

Bhaumik Dhandhukia 35:40

Moloo.

Yeah, so...

Aman Sood 35:55

Pivot table and stuff? No, man.

Bhaumik Dhandhukia 35:58

Yeah, so on vendors piece, yes, we will need to add that in the report side, but on the dashboard side, the report was basically a PDF of the dashboard, basically copy, which did mention what, how many orders went this particular month, you know, that kind of thing. Well, basic level. So go on the dashboard. I'm starting to forget this project, actually.

Aman Sood 36:11

Where is it? Show me, please. Show me.

Well, that's very helpful.

Bhaumik Dhandhukia 36:20

Click on export PDF at the top. Oh, there you go. So you have at the bottom.
You have at the bottom store budget, for example, right? So there's like 6 orders and quota. So similarly, you have last six months of orders in the order trends. Like those are some of the things that me and Umar originally worked upon. And when you click on export PDF, it's this particular dashboard that it will actually export as a PDF.

Aman Sood 36:44
No, but we don't want to export PDF. We want reports in Excel so we can use filters and stuff.

Bhaumik Dhandhukia 36:46
What the hell?

Aman Sood 36:52
This, this what what I'm saying is not helpful at all.

Bhaumik Dhandhukia 36:52
Yeah, so CSV.
Yeah, so let me take this offline. We need to, I do see there is no problem right now anyways. I export CSV functionality as well. So, and based on your input, we'll have this optimized further. So we'll add some filters and stuff as well here, based on product, vendors, stores, users, and whatever is included in the orders.
Based on that, you'll be able to export the data.

Aman Sood 37:16
We should be able to, Bhaumik, Bhaumik, we should be able to create custom reports on this. Alyshia should be able to create custom reports. Custom reports is not a complicated thing to do, right?

Bhaumik Dhandhukia 37:26
Right, right, right. Yeah, we'll be able to add filters in here.

Aman Sood 37:29
So my question here is, Bhaumik, you know, I'm sorry, man, I'm a little disappointed. Again, for the 4th, fifth time, I would say. This project started over a year ago. And I

understand it started with Omer. And you know, Omer is not working on this anymore. And then, you know, I think someone else before Usman worked on this or not worked on this. And then, you know, we got Usman, you know, poor guy has to deal with.
whatever crap is there from the past. And here we are investing our time on a demo. Which unfortunately looks like, you know, Bhaumik, you didn't have an opportunity to check first anyways. The best way is to, before any devs are demoing anything, I would assume that, you know, the project management would see it before demoing it to the broader team. Is it a fair statement?

Bhaumik Dhandhukia 38:18
Yeah, actually, sorry I was away, so I was not aware of what's going on here. I just called back recently last week, so trying to get things on my plate now.

Aman Sood 38:28
So when can we see, because this is the exact same conversation we had, I don't know, six months ago. Basit, do you remember?
I want to have a seed this time, but see if you remember.

Muhammad Basit Munir 38:40
Yep.

Aman Sood 38:41
Yeah, here you go. Thank you for remembering. So we are having the same conversation again now.
What is the day and date when I'm going to see the demo again? Because you know what, I don't have time as well. You know, Bhaumik, I just came back from Germany yesterday. I'm off today and this is what I'm doing. And you know, I would have been happy to do this if there were results, but unfortunately we are stuck here. Now tell me, Bhaumik, today is the 29th.
Next year starts.

Bhaumik Dhandhukia 39:12
I think one week is enough. We can do the demo.
On Wednesday?

Aman Sood 39:20
Sure, can you do me a favor, Bhaumik and Basit? Can you guys check everything before you demo it to us?

Bhaumik Dhandhukia 39:21
Say what?
Yes.

Aman Sood 39:28
Yes.

Bhaumik Dhandhukia 39:29
Yes, we will. I don't think so, though. The feedback provided will take more than three days, and then we'll do some QA on everything, and then we'll be doing our own demo internally, and then we'll be calling for a meeting on that time.

Aman Sood 39:31
Basit.

Usman Zahid 39:37
Sure.

Aman Sood 39:42
No, I, that, that, that's fine, Bhaumik. You know, I leave it with you guys, but I want to say, you know, hear a yes from Basit as well. I didn't hear a yes from Basit yet.

Muhammad Basit Munir 39:51
No, I was, I was saying, ohh, we will be able to do that and we will be doing testing before deming to the team.

Aman Sood 40:01
Okay, so Chris and Alyshia, would you be able to, you know, put a meeting in the calendar for next Wednesday, please?
And I want to be part of that now, not optional. So please make sure, Chris, you

reach out to Harleen to check my calendar. And I would like to join this meeting, and let's put one hour for this.

Chris Bilton 40:20
Yeah.

Aman Sood 40:26
And Bhaumik Embassy, gentlemen, you know, Usman doesn't have all the information of what we discussed in last one year before he started on this project. So please provide him all the information. If you have any questions, reach out to Chris, Alyshia, and keep me copied on these emails until we get to a decision.
And Basit, please or Usman, please remove my e-mail from those automatic emails I get from when you test.

Usman Zahid 40:53
I checked your e-mail but there was not, I didn't find any e-mail. Do you have any other e-mail address?

Aman Sood 41:01
Well, the last e-mail I got was at 10:48 A.m. and it came to a Sood at Hightide Inc. And it was a customer was store owner dot GTA at CC supplies dot local, so it's testing. But if you have removed it, then I think we're good because I received probably 10 emails this morning.

Usman Zahid 41:21
Okay, okay. I will check it again in the code. Maybe there will be some hard border as well.

Aman Sood 41:26
Just double check, please. Just double check. Okay, cool. So we will meet next Wednesday and Usman Zahid, I mean, don't worry, it's not on you. You know, you're doing your best with whatever minimal information you were provided by the team. So, you know, don't take it personally. You're doing good for what you're doing, good for what you're doing. Let's blame Bhaumik and Basit.

Usman Zahid 41:28
Goodnight.
No worries.
Sood.

Aman Sood 41:49
Sure, here you go. Basit, your team member just blamed you, man.
So all right, all right, gentlemen and Alyshia, thank you for your time. We're looking forward to next Wednesday.

Bhaumik Dhandhukia 42:05
Sounds good, thankful.

Usman Zahid 42:06
Payments.

Aman Sood 42:07
Bye.

Chris Bilton 42:08
Thanks, Aman.

Alyshia Digiovannantonio 42:08
Thank you. Bye.

Usman Zahid stopped transcription
